Controlled Access Solutions

UNITY VIDEO & UNITY ACCESS UNIFICATION

Access Control That Works Seamlessly With Video Security

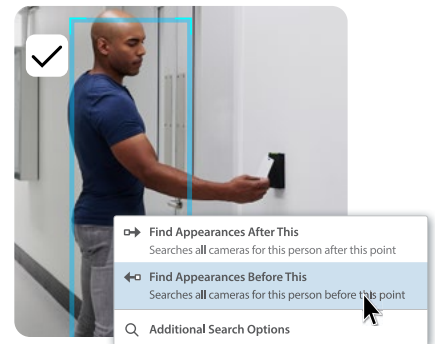

The Unity Access and Unity Video unification provides enhanced security in your facilities with exceptional situational awareness. Working better together, incorporating a video component helps verify access control events and alarms, informs access control responses and links visual and physical matches.

Instantly verify if the person seen carding in on camera matches the ID photo associated with their access card. You can then lock or unlock the door right from your Unity Video dashboard.

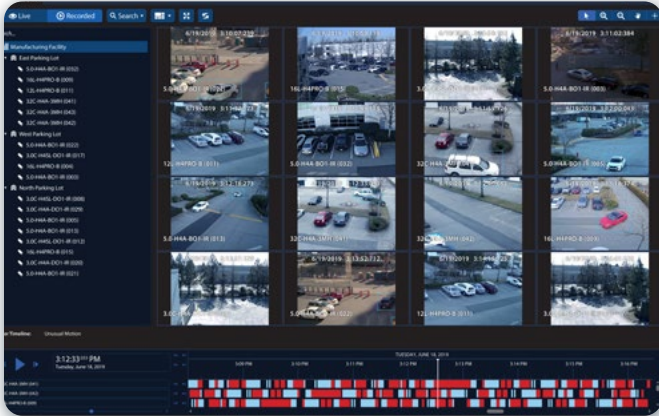

From the same Unity Video dashboard, you can search for that person by using the Identity Search feature.

Using the video from the most recent time the person carded in, you can easily use Avigilon Appearance Search™ technology to identify their current location on-site or review their previous whereabouts. It's that simple.

Unity Video Features

POWERFUL SEARCH

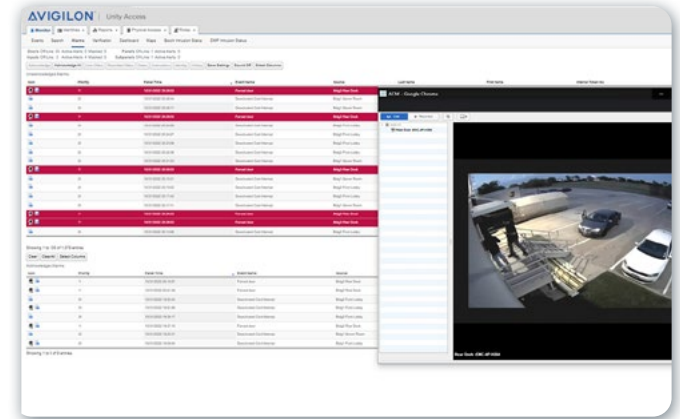

Avigilon Appearance Search technology sorts through hours of video with ease to quickly locate a specific person or vehicle of interest across an entire facility in near real-time.

FOCUS OF ATTENTION INTERFACE

A cutting-edge user interface for live video monitoring that leverages AI and video analytics technologies to determine what information is important and should be presented to security operators.

Unity Access Features

100% BROWSER-BASED SYSTEM

No client software installation required, delivering a ready-to-deploy solution that saves you time.

OPEN-PLATFORM HARDWARE

Integrates with hardware from industry-leading brands that scales from a few readers to larger and more distributed installations.

COMBINED FOR A POWERFUL SECURITY SOLUTION

IDENTITY SEARCH

Enables fast search for a person of interest using their Unity Access cardholder information. You can then use Avigilon Appearance Search technology to determine that person's current or previous location on site.

QUICK ACTION

Unity Access generated door events allow you to create rule-based actions and notifications for quick on-site responses, including immediate facility lockdown.
